

I INDUSTRY UPDATE

Attention AIA Members: Anchor Wall Systems Presents SRW Learning Opportunities

In the interest of ongoing learning, Anchor Wall Systems is now an accredited AIA provider of AIA/CES credits. The AIA/CES is a continuing education system designed to help architects maintain and expand their skills through professional learning opportunities. Architects belonging to AIA must maintain 18 Learning Unit Hours for annual membership renewal.

At the 2000 AIA/CES Expo held this past May, Anchor Wall Systems presented a seminar on Segmental Retaining Wall (SRW) Application and Design and gathered 103 attendees over the three days of the Expo. The program covered:

- Specific design information on retaining wall applications beyond the traditional tall wall to include steps, water applications, 90 degree corners and radius.
- The theory and design of segmental retaining walls and application of this information to the design of retaining wall systems.
- Benefits of using concrete as a building material.

Before you design or build, attend an Anchor Wall Systems seminar to broaden your knowledge base in design, technical information or installation process. Seminars are offered for large and small groups. Our team of experts can customize a seminar to meet your specific needs. If you are interested, contact us at 1-877-295-5415.
